

1. Click **Edit** and then **Mail & Newsgroup Account Settings....**

2. Click **Add Account...**

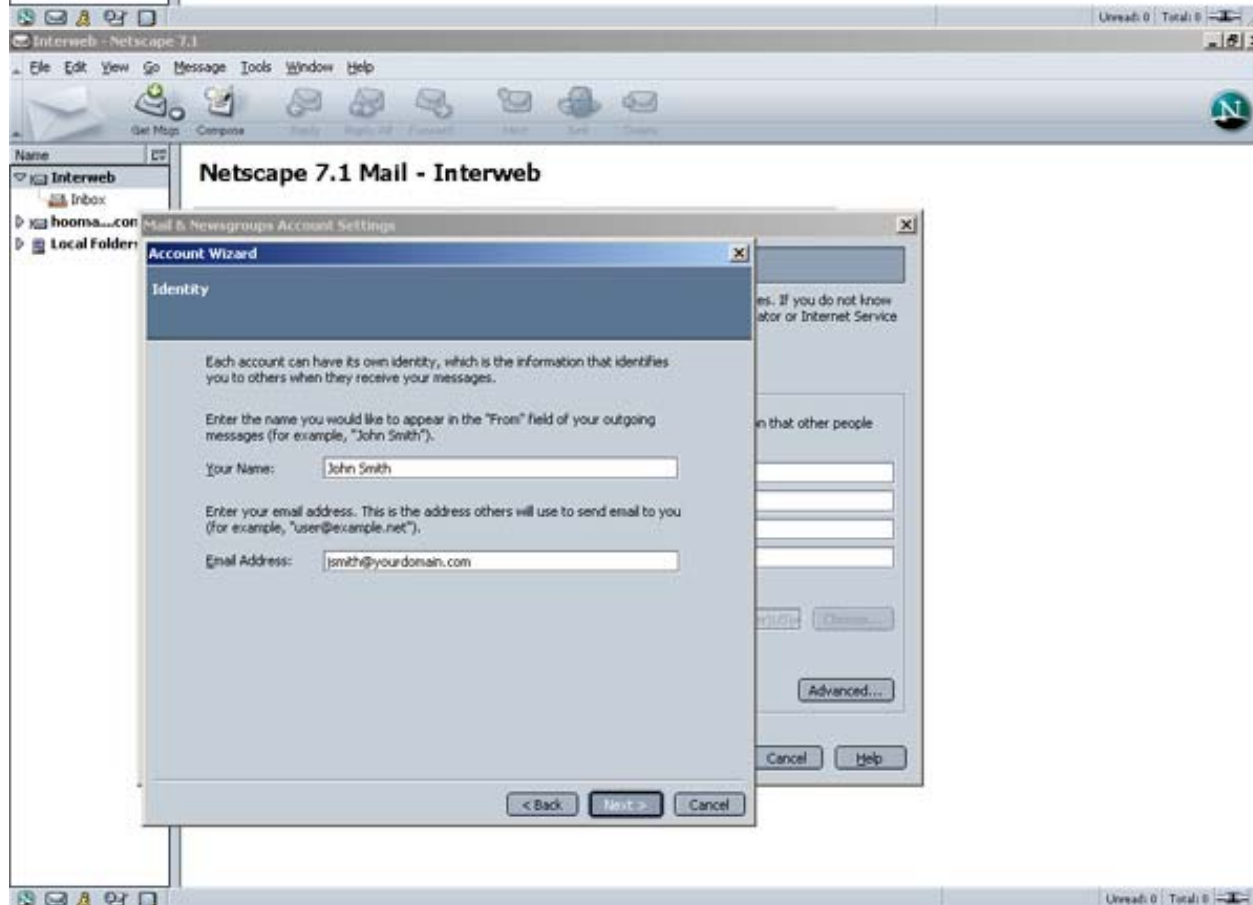

3. Choose **Email account** and click **Next**.

4. Enter your first and last name and then your full email address.

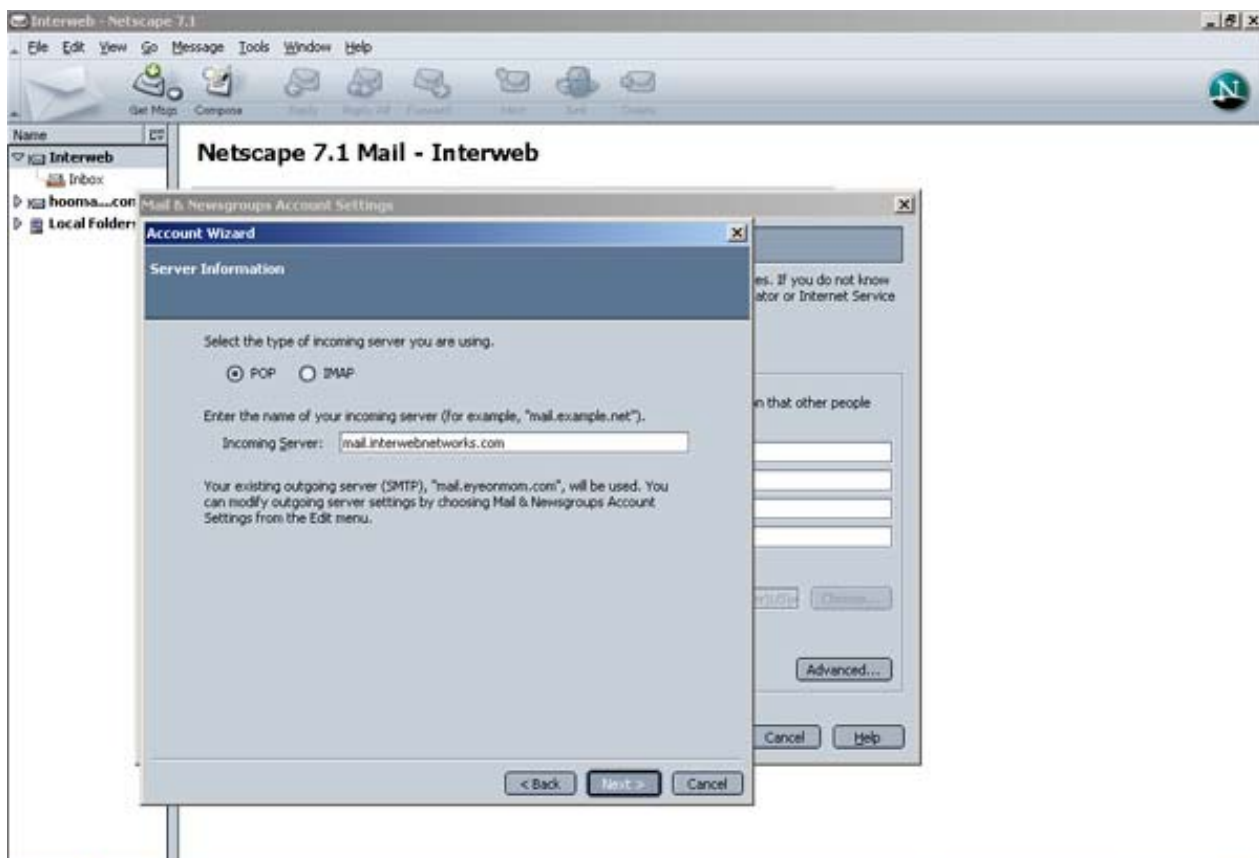

Click **Next**.

5. Leave incoming server as **POP**.

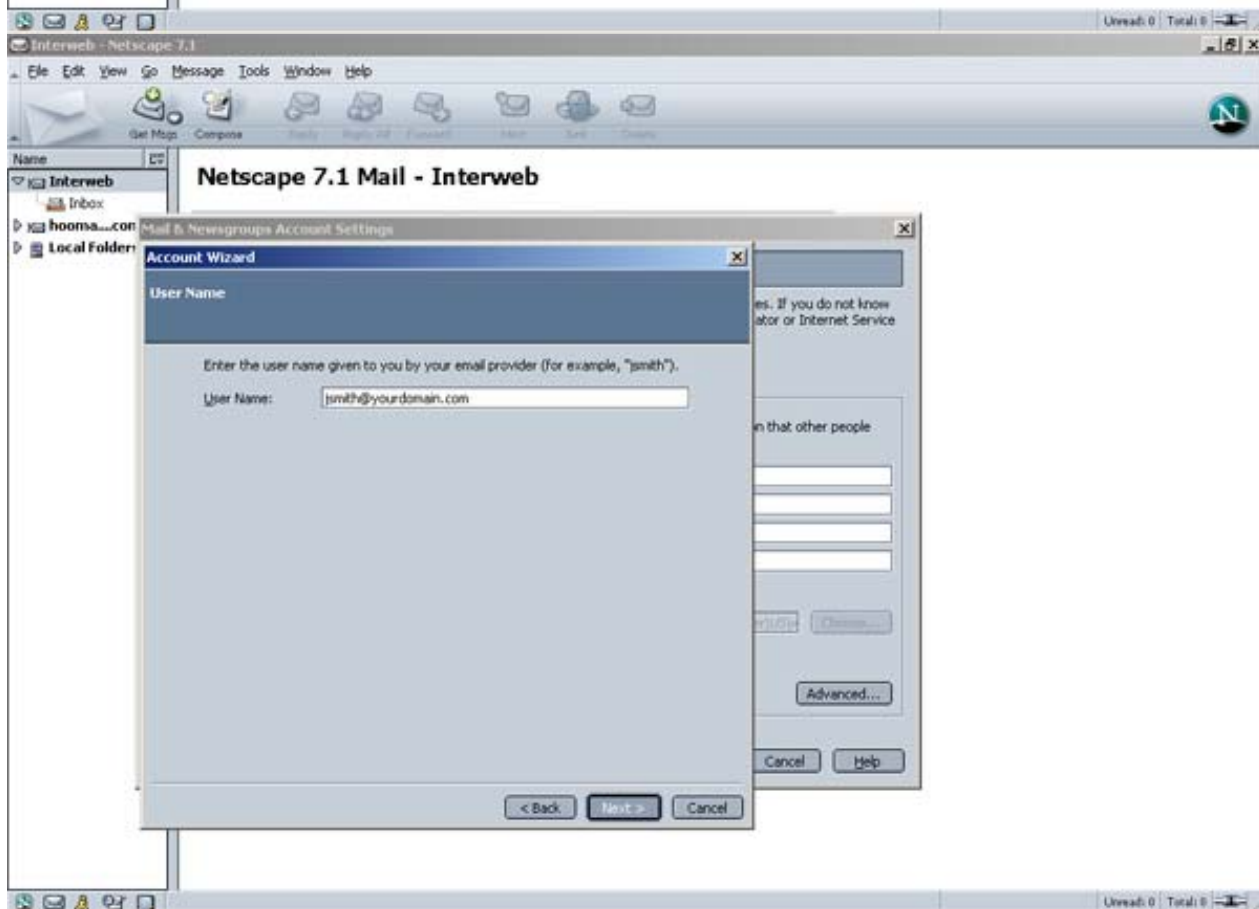

For incoming and outgoing mail servers, enter either mail.yourdomain.xxx (replace yourdomain.xxx with the domain name being hosted) or mail.interwebnetworks.com.

Click **Next**.

6. Enter your full email address under **User Name**.

Click **Next**.

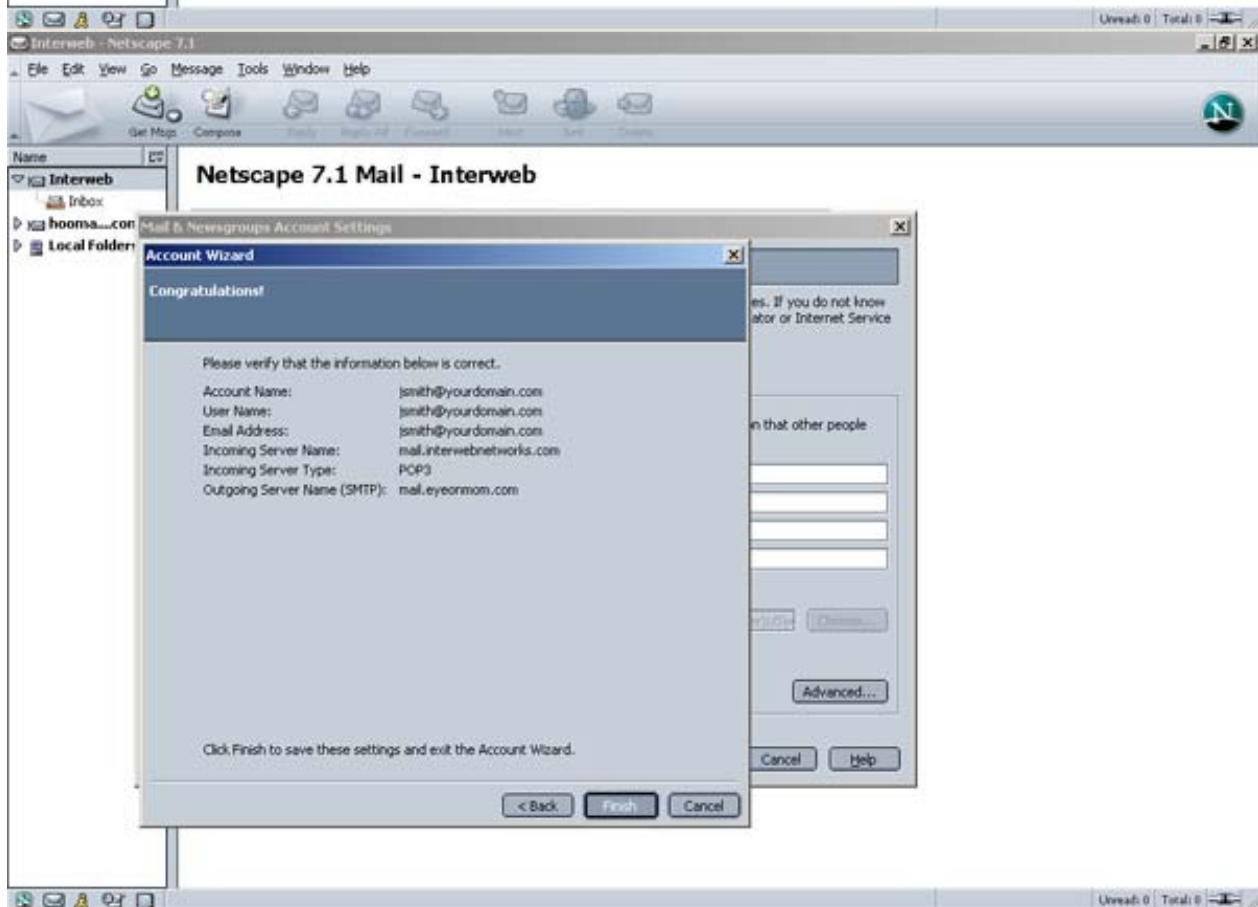

7. Enter your full email address under **Account Name**.

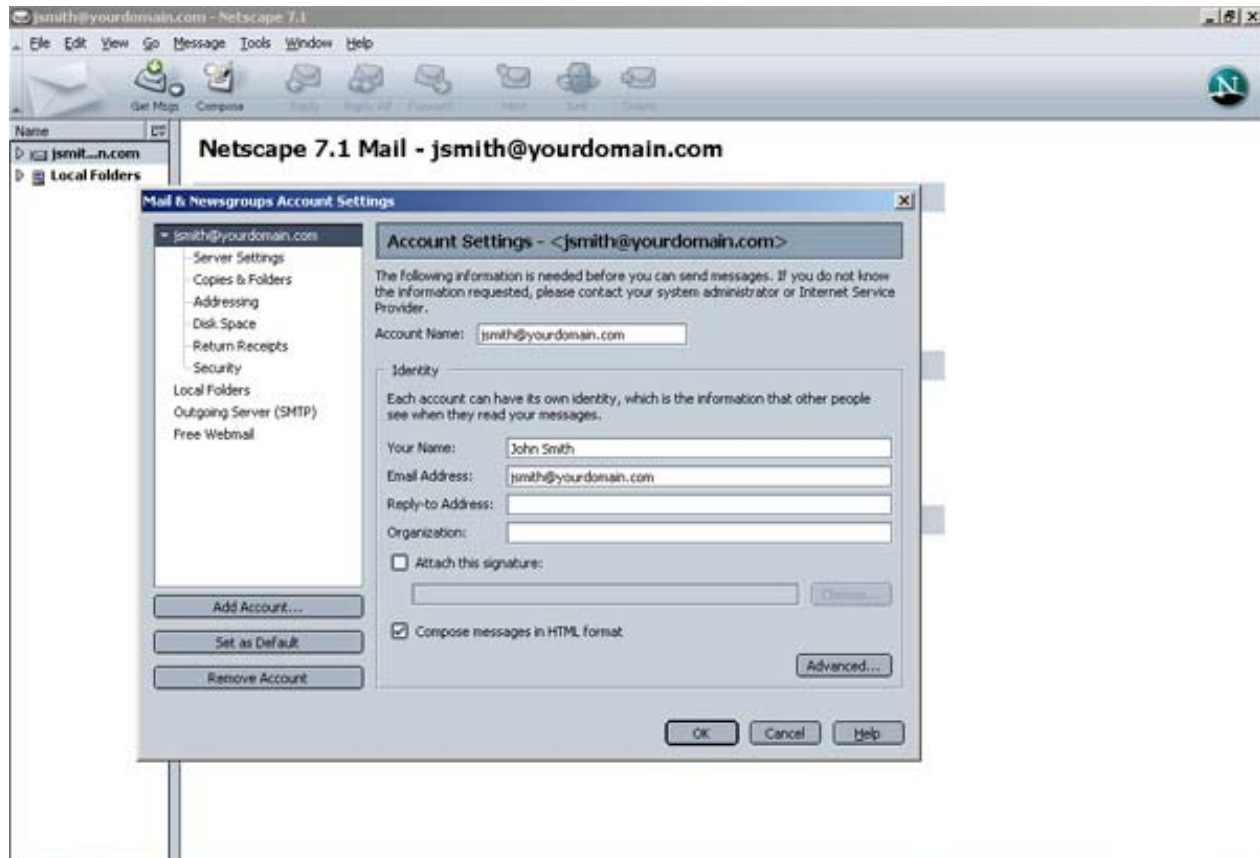

Click **Next**.

8. Click **Finish**.

9. After you click **Finish**, you will see the account name at the top left. There is one more step left.

10. Click **Outgoing Server (SMTP)** and make sure that the Server Name is the same one you entered earlier, **Port** is 25, **Use name and password** is checked and **User secure connection (SSL)** is set to **Never**.

Click **OK**.

You are now ready to begin sending and receiving email!
